Education

Yildiz Technical University

Sep 2021 – June 2026

Bachelor of Science in Mathematical Engineering(English)

Technical Education

42 Türkiye — *Software Engineering Program*

Jan 2024 – March 2026

- Completed foundational modules of an intensive training program focused on system architecture and advanced algorithm design using the C programming language.
- Gained hands-on experience in memory management, process concurrency, and low-level programming disciplines through various projects.

Relevant Coursework

- Data Structures
- Database Systems
- Design Patterns
- Object-Oriented
- Web Programming
- Distributed Sys.

Experience

Architech (Kuveyt Türk)

Oct 2025 – May 2026

Software Developer (Part-time)

- Developed a bond listing screen using React and TypeScript for financial services.
- Collaborated with mentors to implement stored procedures and develop code across orchestration, business, and UI layers in alignment with an N-tier architecture.

Emlak Katılım Bankası (Participation Bank, Istanbul)

August 2025 – September 2025

IT Intern

- Developed scalable applications using microservice architecture .
- Implemented API Gateway (Ocelot) for secure communication and routing between services.
- Built message-based inter-service communication and event-driven architecture with RabbitMQ.
- Designed an infrastructure supporting independent development and scalable service orchestration using Docker

Turkuvaz Media Group

June 2025 – Jul 2025

IT Intern

- Developed a Web API using ASP.NET Core for managing news content with full CRUD operations.
- Implemented Entity Framework Core for relational database design and efficient data access.
- Designed role-based authorization (Admin/User) to secure API endpoints.
- Participating in code reviews and deploying to local environments using Swagger and Postman

Projects

42-Minishell (C Language)

- Developed a customized shell using C and system calls, featuring process management, piping, and signal handling capabilities.
- Demonstrated low-level system proficiency by applying efficient algorithm designs in the parsing and execution of command-line arguments.
- Built a high-performance and reliable terminal simulation through manual memory management and optimized use of file descriptors.

React-Fake API CRUD (React , TypeScript)

- Developed a dynamic user interface using React and TypeScript to manage data fetching and manipulation from an external API.
- Built a performant, reusable, and modular frontend architecture using React class-based components and component-oriented design principles.
- Simulated CRUD (Create, Read, Update, Delete) operations to manage application data and user interactions.

Racing Project (C# , MSSQL , ADO.NET)

- Designed a user-interactive, multi-form racing simulation using C# Windows Forms and MSSQL, implemented with an N-tier (layered) architecture.
- Generated dynamic race results using randomness algorithms and provided detailed statistical tracking for each user.
- Integrated with the Azure cloud platform to enable online data synchronization and user-to-user interaction features.

Technical Skills

Languages: C, C#, SQL (MSSQL), JavaScript, TypeScript

Developer Tools: Git, VS Code, Visual Studio , Postman, Swagger.

Technologies/Frameworks: ASP .NET Core, EF Core, React, Postman, ADO.NET, Microservices
